Geguences ABP31028-ABP35561 represent 4534 novel human proteins designated ORF (open reading frame) 1-4534, and sequences ABN75054-8AN75054 represent cDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, polymucleotides at least 85% identical to referred to as ORFX) proteins, polymucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polymucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of acreening for modulators of ORFX expression or polypeptides, methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopolesis requirity, chemotactic/ chemokinetic activity, haemostatic activity, thrombolytic activity, and may also be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, the content of acids and antibodies may be used in the treatment of cancers, the content of the contents. ester neurological disorders such as epilepsy and Alzheimer's disease, cardiovascular diseases, immune system disorders, disorders related to organ transplantation, disorders of tissue growth and regeneration, diseases such as diabetes mellitus, hypothyroidism, and cholesterol est storage disease, and infectious diseases caused by viral, bacterial, fungal and other pathogens. ORFX nucleic acids may also be used as a proliferative disorders such as psoriasis and benign tumours, other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VHNRAIRNCPWTVALWSRYLLAMERHGVDHQVISVTFEKALNAGFIQATDYVEIWQAYLD 426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in the detection of ORFX genomic sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Prosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
source of primers and probes, in the detection of ORFX genomic sequenc or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Drosophila; developmental biology; cell signalling; insecticide;

gene therapy; chromosome mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 100;

Patent No. 5525495

GENERAL INFORMATION:
APPLICANT: KENE, JACK D.
APPLICANT: KING, PETER H.
APPLICANT: LEVINE, TODD
TITLE OF INVENTION: METHODS AND COMPOSITIONS USEFUL IN THE
TITLE OF INVENTION: RECOGNITION, BINDING AND EXPRESSION OF RIBONUCLEIC ACIDS
TITLE OF INVENTION: INVOLVED IN CELL GROWTH, NEOPLASIA AND IMMUNOREGULATION
NUMBER OF SEQUENCES: 101

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

IT IS FOUND ASSOCIATED WITH INTRANUCLEGLAR CHROMATIN AND PRERIBOSOMAL PARTICLES. IT INDUCES CHROMATIN DECONDENSATION BY BINDING TO HISTOME H1. IT IS THOUGHT TO PLAY ROLE IN PRE-RRNA TRANSCIPTION AND RIBOSOME ASSEMBLY.
-!- SUBCELLULAR LOCATION: Nuclear; nucleolar.
-!- SIMILARITY: CONTAINS 4 RNA RECOGNITION MOTIFS (RRM).

Granzyme A binding to target cell proteins. Granzyme A binds to and cleaves nucleolin in vitro."; cleaves nucleolin in vitro."; L. J. Biol. Chem. 266:14708 (1991).

1. J. Biol. Chem. 266:14703 14708 (1991).

1. SUNCTION: NUCLEOLIN IS THE MAJOR NUCLEOLAR PROTEIN OF GROWING CHARAYOTIC CELLS. IT IS FOUND ASSOCIATED WITH INTRANCCIEDLAR CHARAYOTIN AND PRERIBOSOMAL PARTICLES. IT INDUCES CHROMATIN DECONDENSATION BY BINDING TO HISTORE H.]. IT IS THOUGHT TO PLAY A ROLE IN PRE-RRNA TRANSCEIPTION AND RIBOSOME ASSEMBLY.

2. SUNCELLULAR LOCATION: Nuclear; nucleolar.

2. SIMILARITY: CONTAINS 4 RNA RECOGNITION MOTIFS (RRM).

BEDLINE-87175501; Pubmed-3470736;	Mucleolin, the major nucleolar protein of growing eukaryotic cells an unusual protein structure revealed by the nucleotide sequence."; Proc. Natl. Acad. Sci. U.S.A. 84:1472-1476(1987).	FUNCTION FUNCTION MEDLINE-88312631; PubMed-3409881; Erard M.S., Belenguer P., Caizergues-Ferrer M., Pantaloni A	Amalure rucleolar protein, nucleolin, induces chromatin decondensation by binding to histone H1.";	EUI. J. BLOCHEM. 1/0:325-33U(1988)1- FUNCTION: NUCLEOLIN IS THE MAJOR NUCLEOLAR PROTEIN OF GROWING EUKARKOTIC CELLS. IT IS FOUND ASSOCIATED WITH INTRANUCLEDLAR CHROMATIN AND PRERIBOSOMAL PARTICLES. IT INDUCES CHROMATIN	DECONDENSATION BY BINDING TO HISTONE H1. IT IS THOUGHT TO PLAY ROLE IN PRE-FREN TRANSCRIPTION AND RIBOSOME ASSEMBLY!- SUBCELLULAR LOCATION: Nuclear; nuclealar!- SIMILARITY: CONTAINS 4 RNA RECOGNITION MOTIFS (RRM).	his SWISS-PROT entry is copyright. It is produced through	between the Swiss institute of Bioinformatics and the EMBL Outstation - the European Bioinformatics institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial

SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2 AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC) SUBURITS (MLC) 2 SUBCELLULAR LOCATION: Thick filaments of the myofibrils. DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMMOSED OF 4 HEPTAPEFTIDES, CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

PTM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY. MISCELLANGOUS: EACH WYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT MEROWYOSIN (LAM) AND 1 HEAVY MEROMYOSIN (HAM). IT CAN LATER BE SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ----EEEKNQLEIERLEEQLSINVYDYNCHVDLIRLLR-LEGELTKVRM

Use of retinoic acid and antisense against the central nervous system-specific Pou transcription factor Brn-2."; Circ. Res. 78:395-404(1996).

1. Circ. Res. 78:395-404(1996).

2. I- SUBUNIT: MUSCLE CONTRACTION.

2. SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2 AND 2 REGULATORY LIGHT CHAIN SUBUNITS (MLC).

3. SUBCELLULAR LOCATION: Thick filaments of the myofibrils.

4. ALTERNATIVE PRODUCTE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING PRODUCED BY ALTERNATIVE SPLICING.

5. I- ALTERNATIVE PRODUCTE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

6. I- PUM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.

6. I- PUM: TWO CYSTEINE RESIDUES IN THE SI DOMAIN ARE SELECTIVELY MENOMYOSIN (LMM) AND 1 HEAVY MENOMYOSIN (HMM). IT CAN LAFER BE SELECTIVELY PREDENDARME SET OF 2 SELECTION (LMM) AND 1 HEAVY MENOMYOSIN (HMM). IT CAN LAFER BE SELECTION (LMM) AND 1 HEAVY MENOMYOSIN (HMM). IT CONDUCTED STRUET PROTEINS (S1) AND 1 ROD-SHARED CHEREDARMENT (S1) AND 1 ROD-SHARED
